

## **S6 Figure**

### **HRQoL score by illness phase**

Box and whisker plots demonstrate the distribution of HRQoL scores in each illness phase, dark horizontal line = median, upper limit of box = 75<sup>th</sup> percentile, lower limit box = 25<sup>th</sup> percentile, upper whisker extends to the largest value  $\leq 1.5$  multiplied IQR, lower whisker extends to the smallest value  $\geq 1.5 \times$  IQR. Red dots represent individual scores. They are partially transparent and therefore appear darker where multiple points overlay each other.

Left hand column (**A, C, E**) shows analyses of all participants regardless of the number of forms completed. **A:** All participants regardless of recruitment mode \* Wilcoxon:  $P < 0.05$ , \*\* Wilcoxon:  $P < 0.01$ . **C:** Comparing recruitment modes within each illness phase \* Wilcoxon:  $P < 0.05$ , \*\* Wilcoxon:  $P < 0.01$ . **E:** Comparing illness phases within each recruitment mode \* Wilcoxon:  $P < 0.05$ , \*\* Wilcoxon:  $P < 0.01$ .

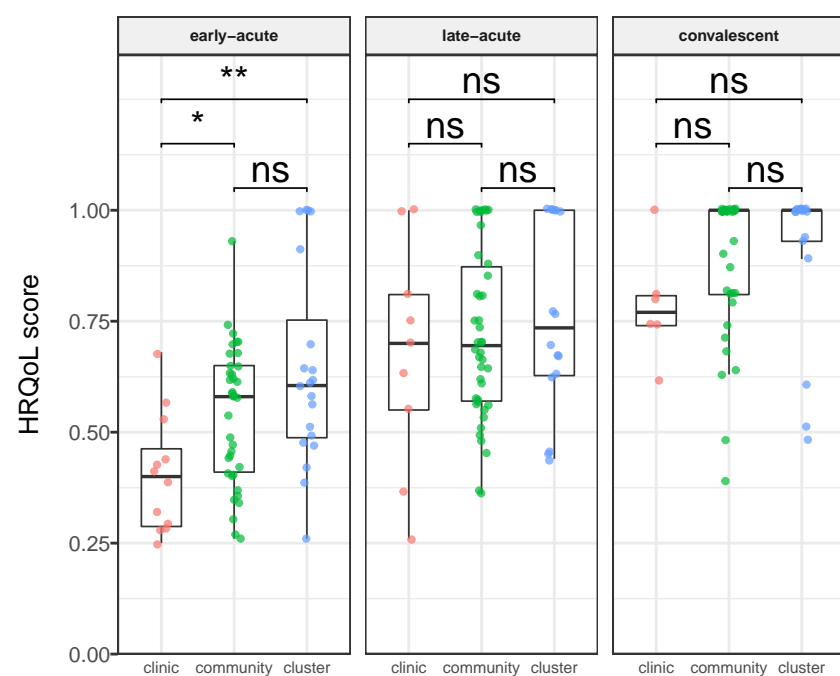

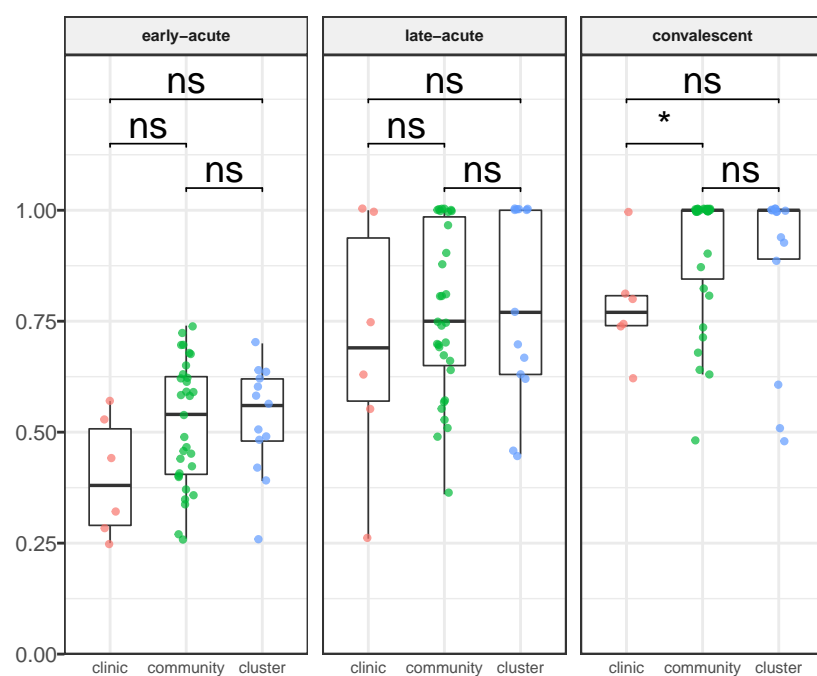

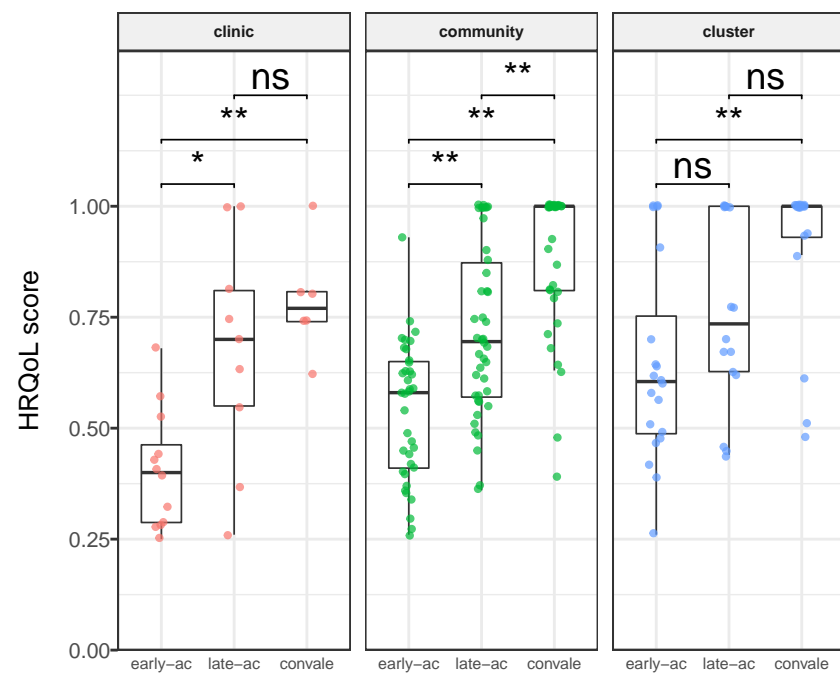

Right hand column (**B, D, F**). This shows analysis of only participants who completed a single form completed in each illness phase. **B:** All participants regardless of recruitment mode \* Wilcoxon:  $P < 0.05$ , \*\* Wilcoxon:  $P < 0.01$ . **D:** Comparing recruitment modes within each illness phase \* Wilcoxon:  $P < 0.05$ , \*\* Wilcoxon:  $P < 0.01$ . **F:** Comparing illness phases within each recruitment mode \* Wilcoxon:  $P < 0.05$ , \*\* Wilcoxon:  $P < 0.01$ .
